A hybrid genre of non–narrative cinema, the essay film mixes documentary and experimental forms to "think through" philosophical, ethical, and film theoretical issues with a high degree of self–reflexivity. Readings will include classic texts from phenomenology, semiotics, and critical theory, as well as current reflections on new media. All films will have English subtitles.

59845	P 290	C01 SEM	Note: "Systems and Synthetic Approaches to Cellular Metabolism" – Life is defined by the consumption and chemical transformation of small molecules. Yet, our capacity to measure and interrogate metabolism has, until recently, lagged behind that of our ability to probe DNA, RNA and proteins in the cell. This course seeks to highlight recent advances in measuring the molecules of metabolism, defining cellular strategies for metabolic control and regulation, and in using synthetic biological approaches to rewire metabolism for the sustainable production of important chemicals. Graduate Seminar 1 MEYER, B J NONE GR ; CURRENTLY FULL Note: "Epigenetics" – The epigenetics 290 will include such topics as nuclear reprogramming, the role of small and long RNAs in epigenetic programming, transcriptional memory, imprinting, paramutation, chromosome structure.	547 LSA	Graduate Seminar 1 VANCE, R E NONE GR

60265	P 290	E01 SEM	Note: "Immune Recognition of the Microbiota" – The purpose of the immune system is to detect and eliminate microbial invaders, but interestingly, the immune system must also co-exist with the 'microbiota', the large numbers of microbial species that inhabit our bodies. An active area of research is to understand the interaction between the immune system and the microbiota. In this class, each week we will review one or two papers from the current primary literature that addresses how the immune system interacts with the microbiota. M 1–2P 301 BARKER Graduate Seminar 1 NGAI, J NONE GR Note: "Advances in Sensory Neurobiology" – This seminar will discuss and review the recent literature in the area of sensory neurobiology. The focus will be primarily on the molecular and cell biology of sensory systems, including on how studies in this domain illuminate sensory system function and sensory-guided behavior.
