Note: "Introduction to High Performance Computing (HPC) for Astrophysicists" - This course will provide an introduction to Unix targeting shell scripting, makefiles, compilers, revision control systems, etc., and the working environment on an HPC system at the National Energy Research Scientific Computing Center (NERSC). Students will be given accounts at NERSC in order to gain experience running a variety of current parallel codes in astrophysics and handling both the resultant large data sets generated by these simulations as well as observational data sets through NERSC's Science Gateway Nodes. Note: "Ethical issues in astronomy education, research and enterprise" - Astronomers encounter a series of ethical dilemmas during their careers that need to be resolved correctly if the integrity of the field is to be preserved. The goal of this graduate seminar is to sharpen ethical reasoning, knowledge, awareness and commitment by providing a fundamental background in responsible conduct as a scientist. Topics covered: Research Misconduct, Data management, Peer review, Authorship, Intellectual property, Conflicts of interest and commitment, Mentoring, Dual use technologies, Environmental and Cultural Impact. Note: Cross-listed with Physics C285 section 1.

37356	P 201D	001 LEC	Th 4-6P	206 DWINELLE	19th Century	4	TANG, C	20	
			Note: This seminar aims to help students gain an overview of the main literary phenomena of the 19th century. We will read canonical literary texts along with historical as well as contemporary criticism. Guest speakers throughout the semester will familiarize us with current research. 						
37359	P 204	001 SEM	F 1-4P	282 DWINELLE	Compact Seminar	2	SEEBA, H C	5	
			Note: "Heinrich von Kleist: Dramatic Challenges to Truth" - Kleist's writings are an ideal guide to staging the literal meaning of language and to understanding the conceptual significance of verbal images. Identity formation, historical understanding, the lure of the abyss, the violence of stereotyping will be some of the topics to be discussed in the seminar. Readings and discussions in German. This course will only meet for 5 Fridays from January 30-February 27, 2015. Also: GOKTURK, D

			Note: So-called "mystical" forms of thought and experience have played a major role in the history of modern philosophy and literature from Hegel to Georg Lukacs, Martin Heidegger, Georges Bataille, and Jacques Derrida, and from Novalis to Robert Musil, Paul Celan, Ingeborg Bachmann, Pierre Klossowski, and John Cage.

			Note: "Comedy and Critique" - This seminar will examine the social dynamics of laughter across multiple media. A basic impulse of comedy - from slapstick to mockumentary to standup - is to temporarily destabilize and critique the status quo by revealing its unquestioned assumptions and contradictions. In this way the comic mode has affinities to critical theory. It is no surprise that Benjamin, Kracauer, and Adorno wrote						

37371	S 214	101 DIS	repeatedly on Chaplin and on the social function of comic interventions. More recently, comics intervene by mobilizing tactical role-play and inviting the audience to join in their game of exposure. Also: GOKTURK, D

			Note: "Nietzsche, Freud, and Beyond" - In our readings and discussions, we will explore the (strongly interrelated) writings of Nietzsche and Freud as well as pursue their works and notes in the context of our various intellectual interests and projects. Depending on these projects, the seminar will find its ways within the past two centuries or so. Joint readings will provide a core corpus, among them Freud's The Interpretation of Dreams and Civilization and Its Discontents as well as Nietzsche's Also sprach Zarathustra and Ecce homo. Taught in English with texts in German or English translation. nbsp;

			Note: When speakers of different languages interact closely, it is typical for their languages to influence each other. Every domain of language, from phonology to semantics, may undergo changes as a result of such language contact. Taking examples from Germanic, this course will examine language contact as a source of language change and different types of language contact phenomena. nbsp;

Note: "Freud and Moses: History, Theology and Judaism" - Freud's last work on Monotheism and Judaism is understood in the last decades as vital for both the attempt to reevaluate the place of Jewish history and philosophy in Freud's corpus, and to the analysis of the origins of ethics in religion, the affiliation of monotheism to violence, and the restructuring of History as trauma, as reflected in the current debate on post-secularism. The works of diverse thinkers as Sigmund Freud, Jacques Derrida, Jan Assmann, Richard Bernstein, Edward Said, Jacques Lacan and others will be discussed.

Note: "Universality in random growth processes" - The KPZ equation, introduced by Kardar, Parisi and Zhang, is a stochastic PDE that models randomly evolving interfaces that are subject to constraining forces such as surface tension. It is anticipated to be a universal object, in the sense that many microscopic models will share the KPZ equation as an accurate asymptotic description of their late time behavior. This view is supported by extensive numerical evidence, recent experimental evidence involving liquid crystal instabilities, and a limited but growing body of mathematically rigorous work.
